## PROJECTS

### Heart Disease Prediction

- Objective: Prediction of Heart Disease Occurrence .
- The correct prediction of heart disease can prevent life threats, and incorrect prediction can prove to be fatal at the same time
- Detection of such cardiovascular i.e., heart diseases might be done with the help of some common symptoms like regular illness or even be predicted using risk factors such as age, family history, diabetes, hypertension, high cholesterol, tobacco smoking, alcohol intake, obesity or physical in-activity, etc.

### Restaurant Website

- This website is developed using React.js
- This website helps the user to check the available items in the Restaurant and check their costs and also search the items which they are looking for(fetched from Edaman API)
- Website link- <https://hello-restaurant.netlify.app/>

### Employee Management System

- Employee Management system is an application that enables users to create and store Employee Records. The application also provides facilities of a payroll system which enables users to generate Pay slips too.
- This application is helpful to the department of the organization which maintains data of employees related to an organization
